

ACO DRAIN

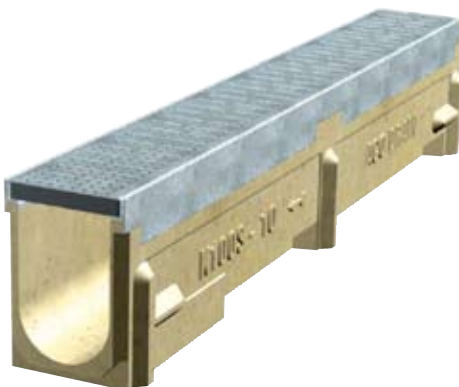

**Westjet Simulator Hanger
Calgary, AB**

ACO PORTFOLIO

Product:

K100S with Type 411 galvanized steel perforated grates

In designing two flight simulators in Calgary, Westjet was looking for a drainage product that would allow quick and easy surface drainage for occasional, small hydraulic fluid leaks or spills. Westjet engineers chose KlassikDrain's K100S system with Type 411 perforated galvanized steel grates.

Approximately 30 meters of "containment trench" drain was installed to completely surround the base of each simulator.

Shortly after installation, the trench was put to the test when a hydraulic fluid line broke, flooding the control room. However, no damage occurred as the fluid was quickly caught and contained.

Due to the proven success of the system, ACO has already been installed in two additional simulator rooms.
