

ACO DRAIN

GO Transit Streetsville Bus Garage Mississauga, ON

ACO PORTFOLIO

Product:
Specifier:
Contractor:

S100K PowerDrain with ductile iron slotted grates
MCW Consultants, Toronto, ON
Buttcon Ltd., Concord, ON

The GO Transit bus garage facility is Silver certified under Canada Green Building Council's (CaGBC's) LEED program. This is the first LEED-rated transit building in the greater Toronto area with the intentions of building a few more very similar to this original design.

The specifier recommended that a trench drain system be installed inside the building because of the chemical spills in the vehicle

maintenance area and to avoid standing water after cleaning the floors.

ACO's PowerDrain S100K was chosen because of its hydraulic performance capacity and ability to withstand the constant movement and turning of vehicles. Additionally, the ductile iron grates and polymer concrete body can withstand any chemicals that may be spilled during the servicing of vehicles.
