

### PROJECT PORTFOLIO

**Product:**

***8" wide custom trench drain with stainless steel bar grate***

Lucerne Foods realized the need for trench drainage when they washed down the plant floors. To meet the hygiene requirements in food processing, the floors are regularly washed down with sodium hydroxide and need a trench system that was able to withstand this chemical exposure. Aquaduct custom trench was more than capable of meeting their needs.

After consulting with Aquaduct to find a suitable material, Lucerne felt comfortable with the product, and installed over 240 feet. The retrofit installation only caused two days down time due to long section length and easy installation.
