

ACO DRAIN

Fedex Package Handling Building Toronto Pearson Airport, ON

ACO PORTFOLIO

Product:

FG200 with Ductile Iron slotted grates

The Fedex package handling depot in Toronto needed an effective drainage solution for the rain water and run-off from melted snow and ice in the truck loading dock. The trench needed to deal with large capacities of water and the constant heavy loads of truck and forklifts.

ductile iron grates were selected their ability to withstand the heavy loadings.

The FG200 system gives a large trench hydraulic capacity allowing minimal outlets to be used to drain the area required.

ACO FG200 with selected for it's excellent hydraulic capacity and
