

ACO DRAIN

AMCO Farms Leamington, ON

ACO PORTFOLIO

Product:

K100S with Ductile Iron slotted grates

At their Ontario facility, AMCO grows tomatoes & peppers in a 46 acre greenhouse. The growing and packing process uses huge amounts of water daily.

As part of a 7 acre extension, ACO KlassikDrain, complete with ductile iron slotted grates was added in the pump room to isolate spills during maintenance and replacement of valves, pumps and pipes.

Not only does the trench prevent costly flooding of surrounding areas but spilled water can be collected and reused.

KlassikDrain was also added around the packing lines so that floors can be easily washed down at the end of the shift to remove overturned produce and keep the area free of potential slip hazards.
