

ACO DRAIN

Caledon Tennis House Caledon, ON

ACO PORTFOLIO

Product:

K100S with Type 410 galvanized steel perforated grates

The tennis house provides a comfortable area for spectators to sit. After heavy rain, this low area would remain wet for long periods of time and was in need of drainage.

To protect the court surface players are prevented from playing when courts become too wet. Rainwater run-off from the hard landscaping is now intercepted and collected by the trench..

The trench drain has improved the drainage in these areas, helped reduce court down times and fits aesthetically into the setting.

ACO Drain K100S with galvanized, perforated grates was installed to deal with the problem. The grate is ADA compliant and pedestrian safe.
