

ACO DRAIN

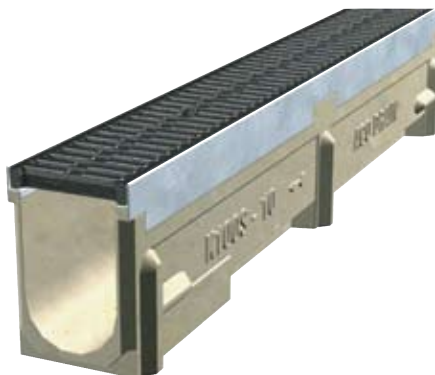

FedEx Package Handling Building Toronto Pearson Airport, ON

ACO PORTFOLIO

Product:

K100S with Ductile Iron slotted grates

The FedEx package handling depot in Toronto needed an effective drainage solution to drain the rain water and melted snow and ice from vehicles bringing packages in from the delivery trucks and planes.

The trench systems are located just inside the large access doors and around the sorting equipment inside the facility.

ACO K100S with ductile iron grates was selected for its ability to withstand the loadings from small vehicles and trucks.

The galvanized steel wearing rail protects the channel edge and gives a neat finish against the concrete.
