K100S with stainless steel slotted grates
William H. Ross Architect Ltd., Edmonton, AB
PCL Construction, Edmonton, AB

The Mercedes Benz Dealership in Edmonton, AB was looking for a trench drainage system in their service area that would meet their drainage needs with little maintenance.

The recommendation for the dealership was to use K100S with slotted stainless steel removable grates. The K100S would be able

to withstand the movement of many vehicles in and out of the service area. The stainless steel grates would also withstand the many oils and fluids that occasionally spill onto the floor.

The quicklok locking system to secure the grate into the channel provides fast and easy access to the channel if ingress is required.
