

# ACO DRAIN

**Rondeau Electric 1997 Ltd.  
Pembroke, ON**

## ACO PORTFOLIO

### Product:

### *K100S KlassikDrain with Type 461 QuickLok grates*

Rondeau Electric in Pembroke, Ontario needed a solution to their trench drainage problem. The existing grates were not strong enough to allow their tow-motor to drive over. In addition, the concrete around the existing trench drain was rapidly deteriorating.

To solve both of these problems KlassikDrain K100S with Type 461 ductile iron grates was installed in the void left by the old trench drain.

The result was excellent drainage of all water, slush, and wash-water in the warehouse. Tow-motors can now pass safely over any section of the trench, making the movement of equipment much easier. A Series 630 catch basin was used to outlet the system and provides a trash bucket for easy clean-out.
