

ACO DRAIN

Whitby Fire & Emergency Services Whitby, ON

ACO PORTFOLIO

Product:

K100S with Ductile Iron slotted grates

Station 6 for the Whitby Fire & Emergency Services Department uses two runs of K100S trench drain with heavy duty 461 QuickLok ductile iron grates and two Type 630 catch basins.

The trench drain runs between the individual bays for the fire engines. The ACO Drain effectively collects and drains the wash down as well as any rain water seeping under the doors.

The run of K100S trench drain runs into the Type 630 catch basins where the water is directed to an oil/water separator.

ACO K100S has a galvanized steel wearing rail to protect the channel edge and gives a neat finish against the concrete.
