

# ACO DRAIN

## Woodbine Race Track Observation Area Toronto, ON

### ACO PORTFOLIO

#### Product:

#### *K100S with Type 411 galvanized steel perforated grates*

The observation area at Woodbine race track is a large brick paved area which opens directly onto the track beneath the glazed barriers.

The galvanized steel edge of the channel makes it ideal to butt the pavers against the side of the channel.

The in-house engineers chose to install 100 meters of ACO Drain K100S with galvanized steel perforated grates to intercept all water from the hardstanding and prevent excess water reaching the race track and affecting track conditions.

The locked perforated grate is completely ADA and pedestrian safe and fits aesthetically into the overall design.
