NW100 with 440 fiberglass grates
Thomas E Brown Architects, Toronto ON
Buildtron Ltd.

The animal shelter in Mississauga is the home for many stray animals and unwanted pets.

The multi-kennel area where the dogs are housed has a pre-sloped floor to enable quick and easy wash down to clean the area of spilled food and animal waste, a trench was needed to drain away the washwater.

NW100 with fiberglass grates was chosen as there are no metal edge rail that could corrode due to contact with waste matter and cleaning fluids.

The 440 fiberglass grate is also corrosion resistant and has large openings that are not easily blocked. The grate has a high hydraulic intake capacity to drain high volumes of water from a pressure hose.
