

# Nutrien STARS Air Ambulance Hangar Heavy Duty Linear Drainage

ACO PowerDrain

Nutrien's support of Shock Trauma Air Rescue Services (STARS) in Saskatchewan, began in 2011 and it continues today with indispensable air ambulance service including dedicating funding towards a new H145 helicopter. This will be an upgraded version of the aircraft in use today.

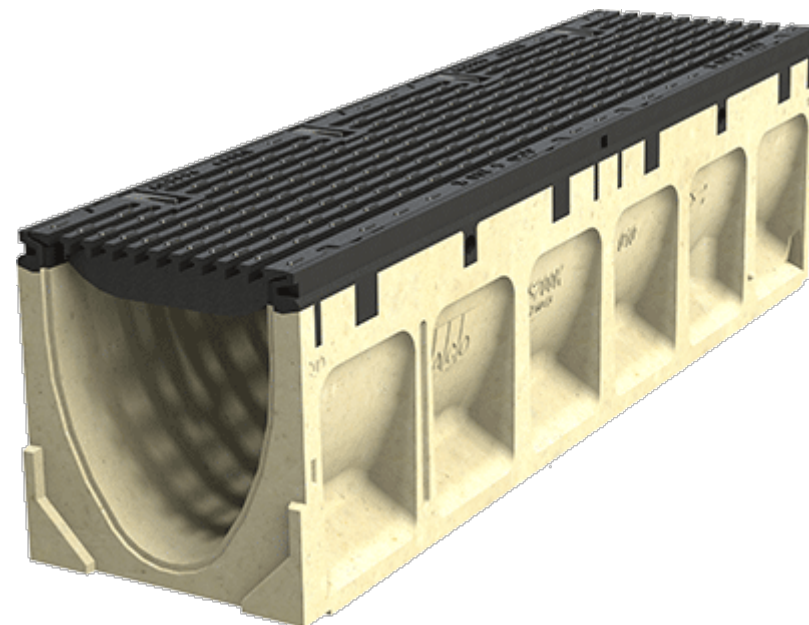

## Project Design Brief

ACO PowerDrain S300K trench drains were selected to meet mission-critical requirements such as drainage performance and structural durability. The system delivers excellent hydraulic capacity to manage large, rapid fire suppression system discharges, ensuring compliance with design flow requirements and maintaining a safe hangar environment. S300K's robust construction and load-class F rated grates provide the strength and reliability needed for frequent helicopter movements and heavy rolling loads.

This project was delivered in partnership with ACO's local Saskatchewan distributor, Wallace Construction Specialties, whose expertise and support helped ensure a successful installation.
