S100K PowerDrain with ductile iron slotted grates

Arthur Murphy Contracting, Dorval, PQ

The City of Pointe Claire Municipal Garage is where city vehicles are cleaned and maintained. The garage needed a trench drain to remove the waste water from washing vehicles and routine washing down of floors. The waste water would likely contain oils and road salts so a drainage solution that could hold up to these pollutants was needed.

ACO's S100K with ductile iron slotted grates was chosen as the

polymer concrete body offers excellent resistance to most typical hydrocarbons and road deicing chemicals.

The ductile iron grates are rated to load Class F so they can withstand the heavy loads from city maintenance vehicles. The boltless locking grate mechanism provides ease of access for routine clean-out and maintenance.
