S100K PowerDrain with ductile iron slotted grates
Groupe Qualitas Inc., Montreal, PQ
Les Pavages Dorval, Inc., Pointe Claire, PQ

The Port of Montreal has modern facilities to handle all types of cargo and is one of the busiest ports in North America. In order to keep the facility running smoothly, and free from standing water, a trench drain system was needed that could remove water and withstand the constant movement of heavy traffic.

The consultant required deep invert depths to create the necessary

hydraulic flow performance. ACO proposed its S100K system with additional extra deep custom made S100K channels specifically manufactured to withstand the heavy loadings.

The custom S100K units are independently load tested to ensure it would perform both hydraulically and load performance.
