S300K with ductile iron grates
Barru-Bryan Associates, Ajax, ON
JJ McGuire Mechanical, Toronto, ON

The truck loading apron at the GM plant was prone to ponding rainwater. To keep the surface free of water, S300K PowerDrain was used on the heavily trafficked delivery area.

With a Load Class F rating, the heavy duty PowerDrain had no problem standing up to the daily abuse it received from the heavy trucks and forklifts. The ponding water has drastically been reduced since the installation.
