System 4000 with galvanized steel slotted grates
Binnie & Associates, Surrey, BC

When designing the track at Swangard Stadium specifiers called for ACO Sport System 4000 with galvanized steel covers not only around the inside of the 400 meter track but also along the outside between the grandstand/bleachers and the track to prevent rainwater flooding onto the track from the solid pavement in these areas.

Catch basins used with the System 4000 have trash buckets that collect leaves and any debris from the grandstand areas.

System 4000 is an open polymer concrete unit with a choice of galvanized steel or plastic grates.
