AT500 Tunnel
Parks Canada, Calgary, AB
Lloyd Dennis Contracting, Lethbridge, AB

Conservation specialists working at the Waterton Lakes National Park in Calgary, discovered that the roadways were a hazard to the endangered salamanders natural habitat. The salamanders migratory paths crossed the roadways and during migration, many were being killed as they crossed the roadways.

A tunnel system was built into the road complex around the park to

allow the Salamanders safe passage beneath the road.

The AT500 is an 18" wide tunnel that is rated to load class D to ensure the safety to both salamanders and drivers.

ACO Wildlife recycled plastic, tunnel entrance and fence systems were used to guide the Salamanders into the tunnels.
